MudGE is a software package for creating bitmap fonts. This utility can be used to create a 2D ASCII, monospaced or proportional font, with up to 14 lines of text, that is suitable for use as a texture in both OpenGL and DirectX. Furthermore, the font can be used to create texture images with JPEG compression at different levels of quality. The data for each font are stored in BMP format, allowing easy and fast loading with a PC. The fonts can be loaded into the main RAM or into one of the texture images at a time. This utility also makes it easy to check the results of the font generation without the need to re-generate the font. MudGE was originally written by Johan Helmich and later revised by Stroustrup (2003). It is released under the terms of the GNU General Public License. You are free to copy and distribute the program; see the file COPYING for details. NOTE: MudGE Font Builder has been discontinued by its original developer. Usage: MudGE can be used in the following ways: Create

or edit a 2D ASCII, monospaced or proportional font. To create a new font, select a font type from the menu. Enter font name, size, background color and foreground color. Enter a file name or path. To edit a pre-existing font, select the font to be edited. Add a text string to the font. Deletetextstring from the font. Load the font to the main RAM, or to one of the available texture images at a time. Save the font to a BMP file. Run the program. Go Back Text | Color | File | Height | Width | Lines | Font Type --- | --- | --- | --- | --- | --- text1 | red | bmp1.bmp | 24 | 24 | 10 | Arial text2 | blue | bmp2.bmp | 24 | 24 | 10 | Times text3 | green | bmp3.bmp | 24 | 24 | 10 | Courier text4 | brown |
