[Mental and physical development of 12-year-old children with retardation of intellectual development]. The aim of this study was to examine the intellectual, social, emotional and motor development of twelve year old children with retardation of intellectual development as defined by the ICD-10. Fifty seven children with a mild retardation (the IQs of 70 and 75) were assessed. Their mean IQ was 64.3 (range 54-79). There were 26 boys and 31 girls. Two to five children with the same diagnosis were examined from one to four times a year for a period of one to three years. The Wechsler Intelligence Scale for Children was administered to all children. The data was compared to a group of 25 children without retardation and to the Dutch population norms. The girls showed lower IQ scores than boys. The regression analysis showed that the length of time since the diagnosis had a significant effect on the IQ and some subscales, but not on the social skills. The scores of the social competence and the peer interaction skills were lower than in a group of 25 children without retardation. The motor skills were above average. All subjects were able to manage the more difficult subtasks of the test. The difference in the motor skills between the group with retardation and the reference group was significant. Children with retardation of intellectual development had lower IQ scores than children with normal intelligence. The reason for this can be explained by the fact that girls were underrepresented among children with retardation of intellectual development. The lack of social competence and the poor motor skills of children with retardation of intellectual development are disturbing, and these skills should be an important part of treatment programs. Bullous skin disease in childhood. Bullous skin diseases (

Get Me Out of Here!" in the Bahamas, Saturday, Nov. 29, 2016. (AP Photo/Lucy Nicholson) A 23-year-old woman has been killed and a 19-year-old man has been seriously injured in an apparent murder-suicide in Georgia, according to WSB-TV. The man was identified as 23-year-old Divya Deshmukh and the woman was 23-year-old Trinity Eller, the news station reported. The incident occurred in Lakewood, a suburb of Atlanta. WSB said the incident occurred at an apartment complex and the pair were inside an apartment when a friend of the woman confronted the man about an "incident" with the woman. The two got into an argument and the man shot the woman. He then went into the other apartment and shot himself. Atlanta Police told WSB that the incident was the result of a domestic dispute. Written by a Professor of Architecture and Design for the Architecture and Design department at Bennington College, the book presents various buildings by Mies van der Rohe (1886-1969) and details the structure, function, and design of each building in precise detail, both in terms of the building's structural and spatial relationships and with particular focus on Mies' interpretations of Bauhaus principles and earlier architectural movements. The central focus of the book is on buildings and how they are related to the context in which they are located. While the book shows some of the works of Mies in relation to the architectural movements of the time, the primary focus is on the features of the buildings themselves. In the book, each project is described in a manner that highlights Mies' unique approach to building design, materials and scale. As a result, the book is not only useful to students of architecture and design, but it is also an invaluable resource for Mies' admirers and critics alike. The 2d92ce491b
