It aims to test the resilience of the financial system to the negative economic effects of a "near-miss" event, a collapse in output that is not caused by financial crisis. It was introduced on 20 July 2013, following the financial crisis of 2007–08, and was again undertaken in October 2017, as a result of the United Kingdom's vote to leave the European Union in the 2016 EU membership referendum and the subsequent 2017 General Election. Details The exercise simulates the shock of a "near-miss" event, which is defined as an output shock that comes close to creating a recession. In the 2010 PSST, the Bank of England aimed to simulate an output slump of 2% of GDP. The exercise was conducted on 30 June 2013, with data from September 2011 used to build the scenario. It was conducted in parallel with the Financial Stability Model (FSM) exercise and the outcome of the two exercises was published on 20 August 2013, with the PSST being used to estimate the probability of a systemic banking crisis (or "failure") occurring. In a systemic banking crisis, it is typically triggered by a deposit-run that leads to losses in the interbank money market. The
