Typewriter Systems Wikipedia, the free encyclopedia.Q: Effective way to compare

multiple elements in a list for equality I have a list of entities and I need to check if

all elements are equal to some other entities. If the list has only one item, it's easy to check that with an element-wise equality check: if all($el == el2$ for el in

[my_list, el2]): print("...all elements are equal...") But if the list has more than one element, what is the most effective way to compare the elements for equality? Edit:

The solution pointed out by @akm is somewhat useful, but not quite what I want. What I want is a situation like this: my_list = [1, 2, 3] my_list2 = [2, 2, 2] This is the behavior I want, but using the most effective method to ensure that my_list and my_list2 are the same:

```
print(all(my_list == my_list2)) # True
print(my_list == my_list2) # True
```

A: The best way is the all method. Note that it is $O(1)$ (constant time) so it can handle multiple items in list. >>> my_list = [1, 2, 3] >>> my_list2 = [2, 2, 2] >>> all(my_list == my_list2) True >>> my_list == my_list2 True

EDIT Assuming that you want to avoid duplicate element and don't

care about its order, you can use defaultdict to map item to its previous version (if any) >>> from collections
import defaultdict >>> my_list = [1, 2, 3]
>>> my_list2 = [2, 2, 2] >>> d =
defaultdict(list) >>> for

Other open-source Unicode Tamil fonts include Managadamutham and Maadamutham Unicode fonts from Software Creative Solutions, and Puzalai font from SatyaSoft. In addition to the modern Unicode, ITA Unicode can be found in bitstream font format. After the launch of the Unicode in 2002, ITA got a competition to develop a source font for new Tamil Unicode fonts. Puzalai Unicode font was developed in 2008. The font contains the space character that can be seen at

the International Phonetic Alphabet page. A Tamil language presentation contains grammatical information and phonetic symbols. Tamil Script Chat is another presentation of vocabulary used in the academic field of Tamil Language. It presents definition and alphabet in the Tamil language. Maadamutham Unicode is a modern Tamil script font. This font is the sister font of Maadamutham font, an old font with different features. Maadamutham Unicode font is developed with InaiMathi font. It includes complete Tamil words in its alphabets and extra Tamil phonetics in its grammar symbols. Unicode Tamil fonts have been used in many applications. It is used in Shareware for Tamil web sites. Indian Languages Unicode font, the first Tamil Unicode font that is available for free download, has been used in Shareware applications. Chulai Unicode is the first font developed by character set experts. Based on the Unicode Tamil 1.0 standard, Chulai Unicode supports all characters from the Unicode Tamil standard. You can open Unicode Tamil characters in Unicode Tamil application; also you can download and paste Unicode Tamil characters in any application that supports Unicode. This font contains Unicode 1.0, 1.1, and 1.2. Notes References Category:Unicode typefacesDoes my IUD need to be removed? Hey, we are basically looking for things that we can do once a month to make our period pain a little better. So far, I've tried eating a special type of food, having a heavy period and using the Fembido, which I used to be on the pill. All of these are getting so annoying that we are probably going to have to find a cheaper, shorter-term option. Does anyone know of a simple method to relieve period pain? For example, if my ovulation was between June 1 and August 14, my period would be approximately July 5-16. I'd like d4474df7b8
