It is a very simple and fast video and audio converter which allows you to transform any video and audio files into another format. It is an extremely useful and powerful tool. You can merge several files and adjust settings

to each of them. The interface is based on the native Windows Media Player and for such reason, it is easy to operate. You do not have to configure the application to use it. Just import the files and change the desired options. All you have to do is add videos one by one in the playlist window, or after choosing the desired output file format, load another item in the list. Once you do this, you can enhance the

output by changing the settings of each video individually. Also, there is an option to automatically finish the encoding job after the video collection has been finished. Unfortunately, the application allows only basic settings.
