Q: How to set the screen size while programming I am creating a program that displays graphs. I want to display a given graph on a given screen size. So is there a method to calculate the screen size in c++. The question is how to display my graphs on a given screen size

A: The best way is to use a graphics

library, such as gtkmm or Qt. When you use a graphics library, you can setup the viewport of the graph and define the size of the window so that it fits the size of the viewport. netstandard2.0
