These overlays can be used to create highlights, shadows, reflections, stripes, and ripples. Photoshop can also export images with both Photoshop and Photoshop Elements, most common file formats include PNG, BMP, TIFF, JPEG, and GIF. Using a brush tool, you can paint any layer. Using this layer, you can then use the Brush tool to paint a different color, or to add or subtract pixels from the layer. You can also use the Brush tool to paint a copy of the pixels you have selected. You can then use this new layer as a mask for other layers you have selected. For example, you can paint the skin of someone on a photo and then paint shadows and lights on the layer. You can then paint out those parts of the layer so that they are not visible, and the rest of the layer is visible. You can then use this layer as a mask for the next layer. To paint and brush your way to success in Photoshop, you need to familiarize yourself with the different brush tools and brushes and use the features of each tool and brush to its fullest potential. Layers Creating layers is a crucial skill in Photoshop, and the ability to use layers efficiently and properly is essential for graphic artists and photo retouchers. To save time, you can use layers to combine multiple files into a single image. You can then use a layer mask to erase and change parts of a photo by painting the layer mask. Understanding how to work with layers is essential when using the features of Photoshop. Photos and documents typically use several layers of information or elements. For example, you might have a layer for the document text, a layer for the image, and a layer for the background. You can then paint the background in a different color and use a layer mask to change only the background. Or you might have a layer for the image, and a layer for the shadow, and a layer for the highlights. You can then paint the highlights and shadows separately and use the layers as masks to eliminate some of the shadows or to add highlights that were part of the image originally. You can use layers to combine multiple parts of an image. For example, you can use a layer for the face of a person and another layer for the clothes. You can use these layers to mask out the clothing and paint the face with black and red paint. You can then use the masks to paint in the clothing and paste the image into the body of someone. You can then use a layer for the hair and mask it to paint out the hair so that all of the hair is black and the rest of the face is red. You can also use layers to composite two different parts of an
