In order to use this software you need to install the MySQL server and to provide the application with the connection settings. After you have completed these tasks and you are connected to the server you can get to work. You can create new databases, tables and queries by using the menus and the buttons from the main window. You need to write code only in the Query Editor that allows you to create new queries that can be saved as SQL files. To back up a database or to transfer the data and the structure from one database to another are tasks that can be performed with just a few clicks.
