These plugins use the AutoCAD native API and the Component Services API. Each API contains the same functions, but with different naming convention. Reporting AutoCAD has a reporting utility called ReportBuilder that can analyze data based on a number of different criteria and provide output as a printed report. Reports can be saved to CSV files or sent to a web server and executed in any web browser. Data can be exported to HTML, Word, Excel, Powerpoint and PDF formats. Reports can be retrieved using Microsoft Excel and can be managed using the ReportBuilder GUI or in Microsoft Access. Editing AutoCAD's core editing feature is the Command Line Interface (CLI). This allows editing of drawings by using commands and text. In the CLI, users can browse through the command structure using command list dialogs. An example of one command list dialog is

the Command Lists Dialog, which lists all available commands and their respective options. An editable area is created automatically as the user enters text. Text can be highlighted and formatted using other command list dialogs. The CLI is the primary means of editing a drawing. In AutoCAD 2010, the CLI interface was replaced with the command toolbar. The command toolbar is more user friendly and does not create a temporary editable area as when using the CLI. Users are no longer required to use the CLI to perform most editing operations, but are able to use the command toolbar for drawing features that the CLI does not include. The command toolbar allows drag-and-drop of objects, which can create and delete components and filters, and optionally publish to the database. The CLI is now used only for the following tasks: Using feature-based commands, such as the Draw Object command, to create and edit objects, components, filters, components and graphs. Creating annotation or other special drawing types, such as Overlay, using the Create Custom command. Creating text notes, such as document information, using the Create Text Note command. Creating object links using the Create Named Link command. Saving drawing objects to external files using the Save command. Creating titles using the Create Title command.
