Q: How to use EnvResolver together with EnvScope in Spring Cloud Config Server

In the docs for EnvResolver (and for EnvScopes too) the configuration of the EnvResolver is straight forward. This question is therefore about how to use EnvResolver together with EnvScopes (in order to provide different configurations for different environments in a way that doesn't involve creating multiple configurations files). The example in the documentation is the usage of an EnvResolver to provide URLs for accessing configurations. The question is how to use multiple EnvScopes here, meaning that I want to be able to specify the EnvScope as well as the URL in the EnvResolver. Below is a minimalistic code which illustrates the problem. Assuming the following Gradle build file:

```
buildscript { ext { springBootVersion = '2.2.0.BUILD-SNAPSHOT' } repositories { mavenCentral() } dependencies { classpath("org.springframework.boot:spring-boot-gradle-plugin:${springBootVersion}") } } apply plugin: 'java' apply plugin: 'eclipse' apply plugin: 'idea' apply plugin: 'org.springframework.boot' jar { baseName = 'config' version = '0.0.1-SNAPSHOT' } repositories { mavenCentral() } sourceCompatibility = 1.8 targetCompatibility = 1.8 configurations { myenv } dependencies { myenvCompile "org.springframework.boot:spring-boot-starter-web" }
```

A minimalistic application which demonstrates the problem: package de.company 09e8f5149f

Iconix EMail ID Crack+ (LifeTime) Activation Code Download [32|64bit] (2022)

Current version is 1.0.1. Please have a look at the software store for more software downloads. Business Software by Iconix
