Category: mathematics[The geometry of psychosomatic illness]. It has been tried to visualize the impact of the space-time continuum on the basic images of psycho- and somatology. For this purpose it has been investigated the basic images of psychic disturbances in schizophrenic patients as well as the influence of the act and the space-time continuum on the psychic results of the digestion. Furthermore the basis of the space-time continuum has been compared with the foundation of the structure of the body. The determination of the spatial information of the brain is also based on the continuum of the space-time.<sup>49)</sup> The invention relates to the drive of a printing press. In printing presses, an individual cylinder, the number of which depends on the respective printing arrangement, is driven by one or more single-cylinder drive mechanisms. Often, several of such drive mechanisms are connected in series, with the result that the total motor current for the entire arrangement is divided and applied to the individual cylinders, i.e. each individual drive mechanism receives a share of the total motor current. The motor current is usually fed from an AC inverter, which amplifies the current to the desired level, supplied by an inverter controller. The AC inverter is usually part of a drive-line inverter and supplies it to a d.c. motor stage for accelerating the motor. The drive-line inverter is controlled by a microcontroller, which is usually part of a printing machine controller. In the usual drive design, the path from the AC inverter to the d.c. motor stage is made using a d.c. link section and a capacitor, which form a circuit resonator. The circuit resonance frequency determines the switching frequency of the AC inverter. The use of one or more capacitors in the drive line is used to ensure that the printing machine will be able to operate when the motor draws large amounts of current from the supply. The capacitor suppresses the ringing that occurs when the motor draws a large current from the d.c. link, and prevents the voltage from falling too

---

low. It is, however, a disadvantage that the capacitor has a significant effect on the total power of the drive system. It is therefore desirable to minimise the amount of capacitance in the drive system. It has been proposed to change the resonant frequency of the drive system by replacing the capacitors with a resistor. It is, however, a disadvantage that there is a large difference in time constant between the
