Since its introduction, AutoCAD has evolved to include many more features, become more sophisticated, and remain at the forefront of the field. Today, it is the industry-standard software for drafting and analysis of architectural, engineering, and construction (AEC) drawings and animations. From that initial release, AutoCAD became the only commercial CAD application that was used in school, an important step that contributed to its success and allowed AutoCAD to be adopted by architects, engineers, and construction companies throughout the world. Since that time, AutoCAD has been used for all types of architectural and engineering designs, including: The New York State Emergency Service (SES) headquarters, and New York City Fire Department Headquarters, both listed in the New York State Registry of Historic Places. I want to be able to find faces and not the eye. I'm filtering for the area of the eye but it's just giving me the whole face. I want it to work for layers too. I can't figure out how to do this. This is the code I'm using right now: Mat Img; Mat gray; Mat edges; Mat output; vector > contours; Img = imread("face.jpg", 0); cvtColor(Img, gray, CV_BGR2GRAY); adaptiveThreshold(gray, edges, 255, ADAPTIVE_THRESH_GAUSSIAN_C, THRESH_BINARY, 15, 10);
