

In this video, LearnKey expert Jason Manibog demonstrates how to use effects to customize video clips in .html. It may seem too complicated, but it's worth a try before investing a lot of money in training. If you want to use these effects, you can download the source code here. <https://github.com/fredemere/Looping-F-Motion-Effects/raw/master/LoopingF.m> To adjust clips in .html you can use tags like: `f-motion-effects[frame] [width] [height] [f-motion-effects[rotation]] [f-motion-effects[duration]] [f -motion-effects[time]]`
