AutoCAD Crack X64

Released in 1982, Autodesk's AutoCAD was the first true CAD program to allow anyone to create and modify three-dimensional geometric designs on any system, without specialized hardware. It is now an industry standard, available for a variety of computer platforms, and is the most widely used CAD application on the planet. In August 1983 Autodesk released AutoCAD LT, a version of the software available for the Apple Macintosh and Atari ST personal computers, which was developed using public domain AutoCAD source code and the new software developed for the next-generation microcomputers like the IBM PC. Autodesk, Inc. is an American video game company specializing in computer software that designs, develops, and markets 2D and 3D modeling and animation software. Founded in 1982 by former Stanford University graduate Mark Rein, the company launched its first product, AutoCAD, in December 1982, and has since released numerous AutoCAD-based software products for a variety of platforms including personal computers, professional graphics workstations, mobile devices, and web applications. Autodesk acquired Avanzino Technologies in August 2016, and the company now operates as a unit within Autodesk. In addition to the core AutoCAD design and drafting software, Autodesk offers Autodesk Revit, a suite of integrated project management, building design, and construction management software, Autodesk Navisworks, a suite of integrated design and engineering tools for the creation of 3D models, maps, and simulations, and Autodesk 360° Viewer, an application for web browsers that allows users to view, manipulate, and interact with a variety of 2D and 3D documents. Autodesk also produces cloud-based online services for manufacturing such as Autodesk's 3D CAD cloud solution which allows users to collaborate and create CAD models remotely. Autodesk is also the primary provider of educational materials for the introductory and professional levels of Autodesk Design Suite and Autodesk Revit software. In 2014 Autodesk developed Project City Guide, an off-road mapping application that was used to create a 2.5 million-square-foot campus map for the new campus of the California Institute of Technology (Caltech), marking the first time that a technology developed to create a map of a city had been applied to the fields of architecture and urban planning.
