It comes with free theme and feature to facilitate its use. JRE Broadcasting is a software service to stream radio programs in the web. It allows you to broadcast single files or files stored on a server. New features added every month. This software is to perform some form of Internet radio streaming. It can broadcast any audio format. It is easy to use and have been designed for intermediate and advanced users. The plugin interface is native. It is cross-platform and you may broadcast from any Linux distro. The XML authentication and multiple-users mode are great features that should be included on other streaming software. Sway DJ is an easy-to-use radio automation software that helps you to build playlists, save and play them again while you are broadcasting your stream. It allows you to create your own custom interface to get the best user experience. djradio is a software to broadcast your radio station's music to the world using a website. It can be used easily and could get its features for free on many stations. It supports RSS feed. Most of the DJs don't like to use a website to play their shows and this app could change that. Radioscope is one of the most powerful Internet radio automation programs. It allow a program director (DJ) to build customized streams for when the station is on-air, which makes it a lot easier than manually scheduling those times. RadioTuner is one of the best softwares for Internet radio. It lets the program director listen to all the stations in the world available in this technology. It is easy to use and has a clear interface and user support. It has a very good automatic mode that helps the DJ to talk to the audience from time to time. RadioTools

## What's New in the Studiomatics?

The radio industry is finally merging its unique real-time play-out software with the fast-growing web world. The result is Studiomatics. Studiomatics is a media automation software solution that boasts speed, quality, and reliability in managing play-out to any combination of SME audio and video formats. The software is built on a powerful, highly scalable, database-driven architecture. This innovative software platform provides flexibility for any station to scale to its peak. Studiomatics is the most reliable, powerful and extensible radio automation software for radio stations. It has the following modules: MediaBase (SQL database), Editor, Player, Recorder, Broadcaster, SMS, Voice mail, News, Commercial, Kiosk, Web portal. All these modules work together, allowing you to create and manage your own unique radio station. MediaBase (SQL database) Access and manage as many types of media as you wish. All media will be converted to common format. The modules are separated by category in order to make the database design optimal. Editor Create, edit and preview the media files. All the editing controls are right there on the GUI windows. Player Play the media files. One click to start or stop the media and adjust the volume. Recorder Records the audio and/or video content from a play button. You can also export recordings to external formats such as AVI, ASF or MP3. Broadcaster Allows you to broadcast to the airwaves. Use it to broadcast to the Internet via FTP or HTTP. Use the player's control panel to manipulate sound, effects, graphics, etc. SMS You have the ability to send out to your SME a recorded SMS message. Voice Mail Record and send out to the SME your incoming and outgoing calls. News A news section with a news file, headlines and local and national stories. Commercial Your ability to create a commercial, must be associated with a station profile. Kiosk Your ability to add stations to your kiosk. Web Portal Your ability to add stations to your web portal. What's New 2 months ago, Studiomatics 7.0 was released. You can see what the editors thought about it. We are happy
