Keymacro is a virtual keyboard and mouse program that works over USB (by default). 1 Introduction: Keymacro is an open source cross platform USB keyboard and mouse program for Linux, Windows and OSX. It allows for control of the mouse and keyboard using the meta key (usually the Alt key) on the keyboard. Unlike many other OS's, there is no keystroke detection from OSX, since the keyboard is treated as a ps2 keyboard, and not as a usb keyboard. This causes problems when connecting a usb keyboard and mouse to the mac. This keymacro program has been developed to work around this problem, and to be as user friendly as possible.
