Windows Interface Automation (WAI) is a collection of libraries and developer tools for use by Microsoft Windows developers. The technology was created to eliminate the complexity and frustration of automating the Windows GUI from the application code. The technology is made up of two parts: A set of libraries which implement the logic of the GUI and a set of tools to automate the actions of the GUI. AutoCAD's DDI also has been used for its ability to automate custom user interfaces in the AutoCAD user interface environment.
