Under the hood, ZipIt operates as a conventional linker or relinker: it takes the folder you select as input, then looks for all the files inside. It will link all the files found to your destination folder. Unlike other software on the market which only link one file at a time, this software works with multiple files and can even unlink them too. It's easy to use because you don't need to configure a single parameter. You can start with the folder you choose, and then specify each file, including the file type and location, that you want to link. This means that there's no limit on file types, hence we're not only talking about.zip and.rar files. Advanced Linker and Relinker is a new version of the original tool. This time round it has some great new features. It is redesigned to be more user-friendly, it remembers the last linked folder, as well as the last linked files. Let's start by reviewing its features: -New look with a new interface, easier to use. -Linking by default now only when required.
