What Is Photoshop? Photoshop is the most popular and well-known image manipulation application in the world. It was first developed in 1992 by Paul Haeberli and John Knoll and today is one of the topmost image editors. It is available for both Mac and Windows platforms. Photoshop is a vector-based image editor that uses a raster-based editing system. It is a powerful program that enables you to work with layers, filters, masks, and raster graphics. Adobe Photoshop's Purpose Photoshop was designed to make the human

experience more painless. It aims to speed up the process of creating and modifying images. It comes with a set of tools that enable you to perform virtually any image-manipulation task. It's optimized with new technology that enables you to work with multiple users. Photoshop was also built from scratch to incorporate the maximum functionality. How Does It Work? It uses a layer-based editing system that enables you to work with multiple layers in one file. You can add new layers and edit existing layers. It uses raster-based editing which enables you to work on pixels and see the result in real time. The program has

sophisticated tools like Adobe Camera Raw, Adobe Lightroom, Adobe Bridge, Adobe Voice, Adobe Typekit, Adobe Animate, and Adobe After Effects. Back in October 2015, two French companies in Paris declared that they had created a fully functional Death Star, the Darth Vader of the Star Wars universe. Considering the reams of detail that are packed into the film's fictional Death Star, it was no small claim. Then again, no one knows what a galactic battlestation is supposed to look like. (MORE: Photo of Star Wars' Death Star Captured on Mountain Embraces the Theory That Filmmakers Designed the Set) But when a certain George Lucas sends a letter congratulating the team for

achieving the "incredible feat," you can see just how happy he was. Someone might remember his call to "build a real one," and maybe find themselves wondering what it would take to build a real Death Star. So where do we start? We'll get to the basics of what a Death Star is, of course, but for those with ideas worth their salt, here's the nitty-gritty. Star Wars is not called a Death Star because it is a flying super-weapon The first Death Star, which serves as the main visual on the planet Alderaan and is destroyed by a laser in Star Wars: A New Hope, has a very distinct look. It's built out of a black, angular superstructure

connected with deep, shadowed areas of darker gray. This is what gave it the name "Death Star." The spaceships that dominate the film are modeled after a Japanese B-29 bombers. (MORE: The 15 Best Star Wars Easter Eggs) Lucas was inspired by the massive B-29 Superfortresses that bombed Hiroshima and Nagasaki in World War II, a fact he confirmed in the book Skyline: Portrait of a City. As he himself recalled, the structure depicted in the Death Star was inspired by the massive World War II Castle Krupp castle in Germany. "The story in A New Hope is about a small group of Rebels trying to hide

on a desert moon," Lucas said in 2011, "and the Death Star was designed as a nice surprise to the Rebels." (MORE: Death of a Salesman: 10 Movie Monsters from the Plot of 'Star Wars') That isn't to say that there aren't other versions of a Star Wars Death Star. There

South Korea to jail broadcasters for 30 seconds South Korea will enforce a new law that will make broadcasters guilty of criminal offenses for broadcasting "too much" information during an emergency by giving them only 30 seconds to report on TV. The

new regulation, which will take effect on June 1, is intended to curb the flow of "fake news" after the presidential election in December. The new rule was issued by South Korea's Ministry of Culture, Sports and Tourism after the assassination of President Park Chung-hee at the Blue House on September 11, 1979.Q: UML activity diagram: nodes and messages I'm currently learning about UML and am wondering about the behavior of the activity diagram in regards to messages. In my understanding, activity diagrams consist of the flow of activities, which is basically events. However, a message is not an

activity but an interaction between an actor and a receiver, which is part of the transaction. In the following diagram, what's the difference between the two interactions? A: Messages are not "interactions" in the sense of activity diagrams, nor interactions in the sense of use cases. The term message is used in the UML standard. An "activity" is a process that involves one or several actors. An "interaction" is a communication between actors. So your activity diagram defines the communication between the actors. No messages. If you like, messages are objects or entities that are involved in some business process.

This can be considered a goal. They are not part of the process, but part of the goal. A goal is a goal and not a message. Hope this helps. Here's how FBI can legally listen in on your home conversations The FBI has a way around your federal privacy protections on encrypted communications. Chat apps and digital messaging platforms are a boon in today's tech world. From a financial standpoint, the market's growth has also come with a run of security and privacy issues. Some of these apps and platforms are forcing the feds to get creative in order to obtain desired information or else risk going dark on their criminal

investigations. One of the biggest issues is encrypted communication, which means not only providing the content to the authorities, but also allowing them to read it. It's a big problem in large part because criminals will use it, due to the fact that encrypted messages are almost impossible to unlock.
