Your Photoshop experts break down all the options in the program, including layer styles, filters, Photoshop's most powerful features, and how to use them. Follow along as your Photoshop experts share top Photoshop tips, tricks, and shortcuts. Using Photoshop? Check out the 100,000 Most Popular Photoshop Tutorials and Guides for even more help and inspiration. Contents show] Creating a New Document It is important to start every image editing project by creating a new document. A document is just a blank canvas that you will begin to create your masterpiece on. You should set your background to white or a color that is easy to see. Then select the blank canvas by clicking on the New Document icon in the toolbar or File > New > and then select "Document". On the next page, you will see a document template. Photoshop will automatically apply all of your background settings. If you want to use a different background, click on the "Background Settings" tab and select "Original". Steps This tutorial uses Adobe Photoshop CS5, Adobe Illustrator CS5 and Photoshop Elements 9.0. Step 1: Open an Image Click on the image you want to use in your new document. You can also download a free image. Step 2: Convert the Image to Grayscale Convert the image to grayscale. Use the GRAYS function under Image > Adjustments > Desaturate. Step 3: Change the Color Mode Go to Image > Mode > RGB. You will have a better resolution and print quality when the image is in RGB mode. Step 4: Create a New Layer Now that your image is grayscale, change the color mode to RGB. You can do this by selecting Layer > New > Layer and using the color settings you want to use in this new layer. Step 5: Select a Layer and Replace the Background To select a layer and make it the background, click on Layer > New > Background. This creates a new background layer, which you can edit later. Step 6: Copy and Paste COPY the image to create a duplicate copy of the current layer. PASTE the image. Select the current layer, and then click on Layer > New > Layer Mask. This creates a mask to help determine which part of the image you want to manipulate.

Q: nodejs vs go lang for game development I have a background of Python and recently built a web application with Django. Currently I am looking to build a web application that will run a game based on an initial concept. I was looking at Golang as I have heard it is a strong contender for web development. I am also looking for a good nodejs javascript example. My question is from the two that I am familiar with can one of them be used to build a server side game? Any good examples of nodejs/javascript game development would be appreciated. A: Thanks for the question. There are two main areas of NodeJS that one would look to use for game development: NodeJS as a backend: A NodeJS process is as close to a server (and does the same kinds of things) as you would ask for. Depending on your use case this may provide you with some more horsepower/resources. If you are building a web application, the idea of a separate server for each app is sort of quaint. Most web apps run in a single container (NodeJs) and serve requests to/from the backend (NodeJS). If you have a need for lots of separate dedicated servers then Node is not your best friend. NodeJS as a frontend: Like web apps, NodeJS frontend applications will run in a container. NPM and similar tools make it easy to run things without having a massive build step. In combination with things like three.js the front end aspects of games can be as simple to build as the web. I have a bunch of thoughts on this, but that may be better answered by other sources so I'll let others fill that out. Q: python pandas getting keys of dictionary in column I have a dataframe with dictionary column, and I want to print the dictionary keys of column 3 df1 = pd.DataFrame({'a': [1, 2, 3], 'b': [7, 8, 9], 'c': [0,0, 1]}, index=pd.Index(['me

Q: Converting WPF Storyboard to XAML Path I have an animation defined in .CS code in WPF that looks like this: `_gop = new PathGeometry(); _gop.FillRule = FillRule.Nonzero; _gop.Data = _mesh.Geometry; _gop.Name = "Top"; var p1 = new Path(); p1.Data = _gop; p1.StrokeThickness = 5f; p1.Stroke = new SolidColorBrush(_colors[1]); p1.HorizontalAlignment = HorizontalAlignment.Stretch; p1.HorizontalAlignment = HorizontalAlignment.Left; double array_2 = data[_id].childs.Count.Value; double array_1 = (double)childs[_id].childs.Count.Value; var a = new AnimationClock() { Interpolation = AnimationClockInterpolation.Linear }; Storyboard st = new Storyboard(); Storyboard.SetTarget(a, p1); Storyboard.SetTargetProperty(a, new PropertyPath("Data")); st.Children.Add(a); DoubleAnimation da = new DoubleAnimation(); da.Duration = TimeSpan.FromSeconds(data[_id].childs.Count.Value); da.To = (double)childs[_id].childs.Count.Value; da.RepeatBehavior = RepeatBehavior.Forever; Storyboard.SetTarget(da, p1); Storyboard.Set`
