Mitchell Kanashkevich Natural Light Pdf Download

Natural Light by Mitchell Kanashkevich. Free download to get started with the eBook version!Q: How to re-order a list which has an element in common with a given element? If I have a list of objects: List inputList = new List() { new MyClass() { someField = 10, myId = 1, someOtherField ='some' } }; and i want to remove the element which has myId = 1, how can I do that? I tried to use RemoveAll but it removes the element from the list instead of just the object. Also, if there is no method/way to remove a specific object, then is it possible to re-order the elements in the list in order to change the object's property? A: A List is not designed to do exactly what you want to do, but you could conceivably write a method like this: public void RemoveElement(MyClass m) { // remove the element from the list MyClass[] list = InternalArrayList; int i; for (i = 0; i < list.Count; i++) if (list[i].myId == m.myId) list.RemoveAt(i); }
