1.10 is the first version that adds the new API. It also adds some new API features, and supports new Docker-related projects and companies. The features in this release are: HTTP token auth Pluggable authentication provider New user id HTTP token auth This is already available in the docker client and in the client-api. Version 1.10 supports HTTP token auth to authenticate the requests made to the API. HTTP token auth is what is used by the Kubernetes API for example. It adds this to the authentication rules in the API, and to the authorization backend. This is pretty easy, but needs to be configured for every project. Let's
