A few months ago, I received a press release regarding FIFA 20's new gameplay focus. To make a long story short, the gameplay in FIFA 20 will be powered by a new physics engine dubbed "Next-Gen". That's the most important part of the whole press release. The other "substance" is that the game will introduce new acceleration, speed, momentum and reactive controls. To put it in the words of those who have been following the news, this is a "complete reboot of the game." It's kind of strange to witness such a dramatic change in an EA sports game which had a good reputation and was quite popular since the early '00s. How does FIFA 20 benefit from this new engine? The answer is simple. New advances in the physics engine will allow the developers to make a more accurate prediction of where players and balls will go in the future. The net result will be cleaner, more dynamic gameplay which should be preferred by players. On the other hand, the more we try to understand how these new advances work, the more we realise how limited the knowledge is. To know more about how the game comes to its results, I decided to talk to multiple people involved in the development process. The first one is Georgesteller, who is a senior engine programmer at EA on FIFA 20. His role is important because he contributed to the new physics engine, so he had an eye on what was going on. Since he shares an office with a senior game designer, he was able to shed some light on how their ideas and thoughts influenced the work on FIFA 20's new engine. Concerning gameplay First of all, I focused on how they use their new engine in the creation of FIFA 20. They're using it for the lighting, collision, animations and animations transitions, which are an important part of the gameplay. More specifically, I asked Georgesteller if he could share his vision of gameplay. This is what he had to say: "The main topic that we wanted to achieve with this engine was to solve some of the problems that we always had in the FIFA engine, where the physics wasn't accurate enough. For example, if you run with a ball, you'd want to control where you'd want to go, and you always wanted to go to a specific direction. With the old engine, you could control

FIFA is the biggest sports game in the world - featuring authentic football movements and more stars than ever before across real-world leagues in over 170 playable countries. There is also a brand-new Career Mode and FIFA Ultimate Team. FIFA 22 will see some of football's greatest talents come to life across a host of new stadiums as well as visionary enhancements like goal celebrations and crowd reactions. Can I think I've seen that before? Up until now, football had only been a matter of following the ball and tapping into the passing system. But in FIFA, the 'passing' system not only allows you to send the ball between players and into the opposition's penalty area, it also allows you to send the ball to players on the other side of the pitch. Combining ball control and passing, FIFA now allows you to play football like never before. "We're introducing essential new gameplay features that are core to the FIFA experience and enabling great moments and authentic gameplay," says Pini Jamis, Executive Producer on FIFA. "We're introducing a new suspension system for shooting and a dribble at all speeds - because you're never too fast, you never want to lose the ball, and you want to be able to make plays while you're running at full speed. The defending AI is getting better, too - and we're taking steps to ensure that defenders get suited up, ready to make the right decisions on the pitch. The ability to select your preferred camera view - and switch away from it on the fly - remains the most natural and flexible way to play, too." Playing FIFA like the real thing As a true master of the game, you need to master a whole new range of skills and techniques, so you'll need to check your game and make sure you're using the game's best control setup, upgrading your Ultimate Team, and focusing on every aspect of the game to make your skills match the real thing. You have to master the fundamentals The new Player Impact Engine combines the advanced physics-based animation of Player Impact with the realism of Players, Players 2, and Others. For the first time, players must now make the call on whether to risk tackling or to clear the ball and keep possession. The new dribble-at-all-speeds system puts the ball firmly in bc9d6d6daa
