Two Are Necessary For Energy Wind and Solar Two are necessary for energy wind and solar power. The energy type should be taken from a wind farm or a solar power plant. The second fuel is the money that someone is going to spend as they try to make money with this energy. The money is going to come in from customers of the energy, like air conditioning and heating. A couple of other costs like transportation is going to come in from the mass transportation, like buses. In a city like Phoenix the costs of transportation are going to be a real issue that must be planned for. The third is upkeep like the maintenance of a power plant. And with energy generated by nuclear power plants that energy is going to stay in the ground for 20 years. The cost of these three things are estimated to be small compared to the cost of energy generated from coal, nuclear or natural gas. The three main costs are transporting, maintaining and the cost of energy itself. The use of wind farms and solar power plants is already happening, even though most of the cost has not been met. The use of energy from wind and solar power plants has been a growing trend over the past decade. It seems that a lot of people feel that wind farms are cleaner than coal. They also feel that they do not have too

high of an environmental impact because the wind farms are not emitting any air pollutants. This is also one of the reasons that government is going to be pushing wind and solar energy to the point that coal is a dirty word in our country. Renewable energy sources are going to solve the energy issue in a number of countries. The only thing is that they are not going to solve it quickly enough for countries like India and China to make the switch. Renewable energy is also going to solve the problem of world energy with the use of nuclear power. The three main energy 595f342e71
