For best results, always test your images on a copy of the material that will be used. Quick Tip: Easy Lightbox One of the most common ways to manipulate images is to lighten or darken them. Although this is possible using the levels and brightness/contrast tools in Photoshop, Lightbox (Figures 6-6 and 6-7) is a much faster way to achieve this task. To use the Lightbox in Photoshop, follow these steps: 1. Select a copy of the image you want to lighten or darken from your catalog or external memory device and place it in the Lightbox. 2. Use the polygon tool to create a selection that defines the area you want to be affected by the image's lightness. 3. Click the Lightbox icon on the Photoshop toolbar or in the CS6 Libraries panel to toggle on the image and deselect other layers. 4. Click the dialog box icon for the Lightbox tool (the dot with a double box) and choose the Light tool from the available choices (Figure 6-6). 5. Drag the Light tool across the image in order to lighten or darken its pixels. 6. Repeat the process as often as needed to produce the desired result. You may also use the keyboard's keyboard shortcuts to apply the Light tool. Choose Tools → Light → Light Source to open the Lightbox. Or press Shift+Ctrl+L to open the dialog box and access the Light tool. **Figure 6-6:** Use the Light tool to quickly lighten or darken selected areas of an image. Use Lightbox as a quick and easy way to lighten or darken an image. Pixlr-a-Paint It's difficult to talk about photography without taking a few minutes to speak of the ways to manipulate photographs. The number of ways to manipulate an image are truly countless, but one of the most popular and simplest ways to manipulate images is to modify the colors in an image. Pixlr-a-Paint (www.pixlr.com) is an online photo editor that enables you to change colors easily. The website allows you to use a variety of tools to alter images, all by simply using sliders and colors that are already built into the application. This program enables you to change saturation, hue, brightness, contrast, sharpness, and gamma;

Cross Compiling When building cross compilers, you may end up with multiple copies of your assembly under the \$(BuildRoot) folder. For example, if you are building an x86 Windows build, you may get the following structure in your project folder: . |--- lib | |---... |--- bin | |---... | | |--- x86Debug | | | |---... | | |--- x86Release | | | |---... |--- build.bat |--- project.sln In such scenarios, you need to have a post-build step to copy your assemblies to one folder. 1. Change the \$(BuildRoot) in the \$(TargetDir) variable to the path to the target machine. For example, if you are cross compiling an x86 to an x86_64 machine, the \$(BuildRoot) must be a folder inside "c:\a\b\x86". 2. Change \$(TargetDir) to a specific assembly directory to copy the assembly to. For example, if you are copying to "bin\x86", change \$(TargetDir) to "bin\x86". 3. Change \$(OutDir) to the folder you want to copy the cross compiled assembly to. For example, if you are copying to "bin\x86", change \$(OutDir) to "bin". 4

In May 2018, the 36th Mayan end of the world came and went. The Mayan calendar is one of the most famous end of the world predictions and that prediction is apparently wrong. The Mayan Calendar is the only calendar in the world that has a fixed date for the end of the world. The Mayan calendar was a calendar system that was based on the number of cycles in the universe. However, the Maya believed that around the year 2012, the world would end. The Mayan Calendar It was a complex system with many segments. The Maya not only predicted the end of the world in 2012, they also predicted that the world would be destroyed due to flood, fire, dark skies, a solar eclipse, and also the fall of cities. The exact date for the end of the world has not been revealed, but there were three main theories behind when the world would be destroyed. The Maya believe that the day begins with the end of the world. The Mayan calendar has a number of different places to measure their days. These days are the longest day, the so-called Yaxk'inaj, which has 2330 days. Then there is the Cauac day, which is 1300 days long. Finally, the Tun day has 216 days long, according to the Mayan calendar. The Predictions about the End of the World There were predictions about the end of the world in the Mayan calendar. Some were for specific events, like the destruction of a city or the death of a certain people. Other people were told to gather food and other supplies for the end of the world. An important part of the end of the world is to be prepared for the time after the end of the world.Q: Display Facebook Like button on website I want to display a Facebook Like button on my website for one of my projects.
