Adobe Photoshop Adobe Photoshop is the industry standard for desktop image editing. Founded by Macromedia in 1990, Adobe Photoshop soon became the industry standard among graphic design and photo editing software for the Mac. Photoshop was developed by Digital Photo Professional (DPP) which was later renamed Photoshop to reflect its use for graphics and photo editing. In 1998, Photoshop was released as a standalone application, allowing users to process images separately from the document into which they were originally imported. Since its creation, Adobe Photoshop has incorporated updates and changes which make the software more efficient, more widely accepted and even ubiquitous. Changes to the software and updates reflect the user base which Photoshop is designed to attract. During the 1990s, Apple switched from the Macintosh platform to Windows because it led to a more cost-effective, user-friendly and popular platform. The need for a Macintosh version of Photoshop also grew as it became ever more valuable for Macintosh owners to edit images on their computers and then duplicate them to their non-Mac hard drives or to other devices such as printers. As Macintosh sales declined, Adobe focused on the Windows platform and released a portable version of Photoshop to compete directly with the Windows version. In 2012, Adobe unveiled Photoshop Elements. The main difference between Photoshop Elements and Photoshop is the large number of features and the price. Adobe Photoshop Elements is free and Photoshop has a price tag which ranges from \$300-799. Adobe Photoshop Elements is considered as a successor to Photoshop Elements and is aimed at beginners. Although the Photoshop Elements application and website that describe its functions are much simpler than those for Photoshop, Photoshop Elements is still an advanced graphics editing application. The Photoshop Elements program is designed to provide basic features for photographers to manage camera RAW image files and manipulate images, clip art

and web graphics. Photoshop elements can import as well as edit RAW image files, support 24-bit color image files, support CMYK (customary in printing) color, and print to a variety of different types of printers. Since it is a free program, Adobe Photoshop Elements is available in many countries. Features of Photoshop Elements The software that Adobe offers is created to allow people to use their computers for web, graphic and photo editing. It allows users to effectively change contrast, brightness, color, color balance, sharpness, size, types, shades, shadows, highlights, levels, layers and color. Photoshop Elements offers a variety of tools that allow people to enhance, save, print, and share their photos 05a79cecff

Q: jQuery AutoComplete with PHP Connection I'm using jQuery Autocomplete to query an MySQL database, using PHP on the backend to execute the query. The PHP side (front) of things works fine, but I can't seem to figure out the correct way to use the return values from jQuery to populate the database with the search results. I have tested without the use of autocomplete, but haven't had any luck either. Any help would be very much appreciated!

```
$search_term = (isset($_POST['search']))? $_POST['search'] : ''; if(empty($search_term)) { echo "0"; } else { $query = sprintf("SELECT * FROM Cart_Item WHERE Title LIKE '%s'", $_POST['search']); $dbh = new PDO('mysql:host=db.mall;dbname=cart;host=localhost','marco','123456'); $stmt = $dbh->prepare($query); $stmt->execute(); } $data = array(); while($row = $stmt->fetch()) { $data[] = array('Title' => $row['Title'], 'Value' => $row['Value']); } echo json_encode($data); $(document).ready(function() { $("#searchBox").autocomplete({ source: function(req, add){ var str = ""; var str = "SELECT Value FROM Cart_Item WHERE Title =? AND Value!=?"; $.ajax({ type: "POST", url: "?", data: $.param({ "search": $('#searchBox').val() }),
```
