New genetic studies of sleep and circadian rhythms have uncovered two new mouse models of human albinism. The circadian clock is the body's internal clock, and its functions include controlling our sleep/wake cycles. In this work, Carlson et al. isolated mouse models of two human forms of congenital albinism: type 2, associated with defects in ocular circadian rhythmicity, and type 3, associated with problems with the photoreceptor cells in the retina. They assessed the function of the circadian

clock in these mice using novel genetic and biochemical techniques. Using single cell time-course measurements of biochemical rhythms, the authors showed that fibroblast cells from the type 2 mouse model displayed defective circadian rhythms. Further characterization of fibroblasts indicated that the circadian clock gene *Per2* could be detected in these cells. These results support the conclusion that the type 2 albino mouse has a functional circadian clock, and that a defect in this clock can cause abnormalities in the overall phenotype. The authors then performed similar analyses of cells from mice with a genetic defect in the rod photoreceptor cells, which are a structural component of the eye and are crucial for the transmission of light to the brain. These mice also displayed an albino phenotype and had altered circadian rhythms. Fibroblasts taken from these animals showed detectable levels of *Per2* but could not be maintained in culture for more than 3 days. Importantly, the authors identified a spontaneous mutation in the *Per2* gene in these animals, which caused a change in the amino acid sequence and an alteration in the clock rhythms in the homozygous mutant mice. Hence, these results demonstrated that the retina is the primary site of action of the circadian clock. Taken together, these experiments identified two independent mouse models of human albinism. These mouse models of the human phenotype will help researchers to understand the genetic basis of circadian rhythms and the retinal circadian clock in humans.
