To create a new image, start with a new file. Add a new layer at the top of the new file. Then, use the tools at the bottom of the program to modify the new layer. The layers are on top of the rest of the document, so if you use a color fill, for example, it appears in front of any existing layer. Don't worry about having to make the layers the same size. You can resize them later. When you use the Select tool, simply click and drag to create an area of selection for the tool. Then, click and drag to add or remove areas of the image. You also have a small brush that you can use to paint color on the image. To edit the selection, use the options provided and choose what to do. You can also use the Transform tool, which works the same as in other programs, such as Illustrator. Start Photoshop Open the new file in Photoshop. Click File > New to create a new file. When Photoshop has loaded, click File > Open or press Ctrl+O. Click OK to accept the file type and open it. If you are

editing a layered file (one with more than one layer), you may need to click File > Load to load the file again. You can use the navigation bar on the right side of the window to access tools, options and features. These are not all at the same place, so where you find the tool you want to use may vary. If Photoshop asks for a file, accept the default (such as "1608 by 1200 pixels") or choose a size that you prefer. Use the Resize tool to make the image bigger or smaller. You can drag the
