

Roblox is a website and gaming platform used by users to make online games. Users are able to log into their account from different devices, whether a desktop computer, laptop, tablet, or phone, to use the same Roblox account. Most Roblox games are created by other users, but a small number of games are published by Roblox, such as Roblox Island, a virtual world developed by Roblox and owned by Disney. Since Roblox's inception, it has experienced expansion. Its games now include a larger variety of genres, such as adventure, racing, dating sim, fighting, role-playing, simulation, and more. Developers can design games and sell them to other users via the website or sell direct via third-party game distribution websites. Most of the revenue that developers generate from Roblox comes from in-game purchases of virtual currency called Robux, which users can use to purchase other in-game items. This is also done through in-game purchases. Developers could choose to charge their players a monthly subscription fee in addition to these in-game purchases. Roblox may also use behavioral targeting technology to modify ads that are displayed to users in the game pages, and it collects and processes personal information users provide to advertise products or other services. Homepage: Currency: Robux Platforms: Windows, macOS, iOS, Android Category: Social & Entertainment Price: Free to play with optional in-game purchases Developer: Roblox Corporation With its success, Roblox has become a developer platform used by many video game companies, especially in the western world. Among those publishers using Roblox for development are Disney, Electronic Arts, Microsoft Game Studios, SEGA, EA Sports, Square Enix, Konami, Bandai Namco Studios, Aksys Games, Sony Interactive Entertainment and Sega. Roblox Games & Features: User-created games The most unique aspect of Roblox is that it allows its users to create their own games. The user does not need programming skills to create a Roblox game. Instead, they will find a set of tools that will allow them to develop their own game. These tools are best used when combined, so the community has created a "game development kit" for the Roblox system. Roblox supports Unity and other third-party game engines and players can use any programming language they choose to
